

M130 | Lost cover locator / Metal detector

Not all metal detectors are created equal

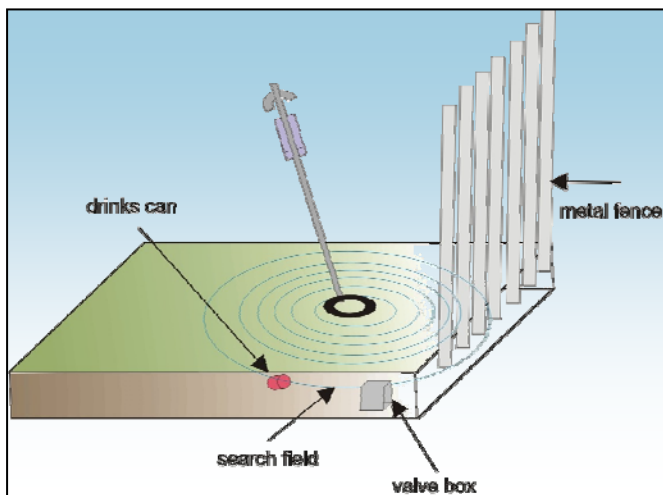

Cheap metal detectors have a wide search field which radiates outward causing many spurious false positive hits from fences, cars, buried cans and cigarette wrappers; they are also affected by overhead transmission lines and changes in humidity. On top of all this they can demonstrate an unfortunate tendency to break when thrown around in utility vehicles. For the professional user these false indications and other limitations are time consuming, frustrating and ultimately expensive.

The Sewerin M130 utilises discriminatory downward penetrating electrical circuitry to eliminate these unwanted indications and is manufactured in high impact ABS for added structural integrity.

Principal of operation

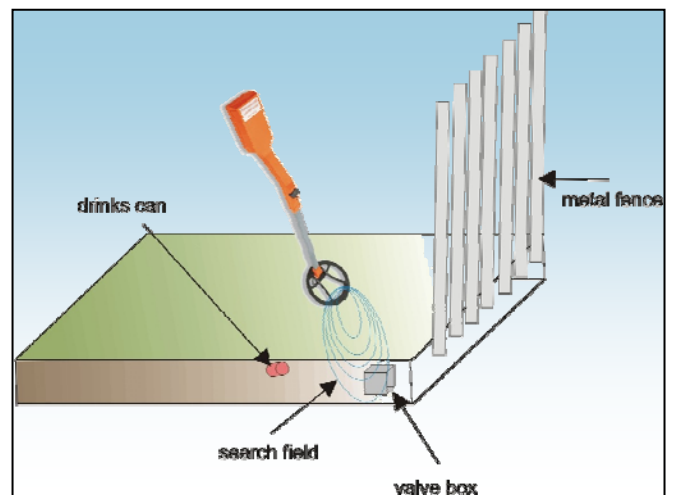

Cheap metal detectors

Many time wasting false positive indications

M130 Lost Cover Locator

Downward directional search field

M130 - Features

DEPTH	
Stop tap box 50cm / 19"	
Fire hydrant cover 87cm / 34"	
Inspection cover 95cm / 37"	

- Moulded from high impact ABS makes the M130 lightweight, balanced and robust (it flexes, as opposed to snapping, when stood on!)
- Single control knob for easy one handed use
- Powered by PP3 (9V block) battery
- Does not require constant re-zeroing
- Can detect objects down to 1m deep
- Ideal for valve boxes and hydrants
- Clear audio signal with headphone socket for noisy environments
- Padded carrying case available for added protection in vehicles
